EDUCATION

Bachelor of Technology in Artificial Intelligence & Data Science

Sri Krishna College of Technology
2022 – 2026 CGPA: 7.7/10

ACHIEVEMENTS

- Winner of Codeathon 2026
- Runner-up of Codeathon 2025
- Solved 850+ Data Structures & Algorithms problems across multiple coding platforms (see profile)
- Achieved top-quartile score on LG Soft India's internal DSA evaluation, securing full-time conversion eligibility
- Conducted comprehensive workshop on Dynamic Programming at college level, covering fundamental concepts including recursion, memoization, and tabulation techniques across 1D, 2D, and 3D DP problems to help students build strong problem-solving foundations.

TECHNICAL SKILLS

Languages:

C++, Java, Python, JS, TS

Core:

DSA, OS, DBMS, OOP, CN

Frameworks:

Next.js, Spring Boot

Databases:

PostgreSQL, MongoDB, Redis

Messaging & Queues:

Apache Kafka

Cloud & DevOps:

AWS, Docker, Kubernetes

Tools:

Git, Linux

EXPERIENCE

LG Soft India

Software Engineering Intern

Bengaluru, India

Jul. 2025 – May 2026

- Designed and developed a comprehensive dashboard and analytics platform for the LG EPK client portal, EPK purchase history, motherboard specifications, and SOC information. Enhanced UI responsiveness through React component memoization and minimized unnecessary re-renders, delivering a smoother experience for procurement tracking.
- Optimized application performance by eliminating redundant condition checks and preventing array overflow/underflow issues across critical data pipelines. Debugged and resolved multi-threading race conditions and thread-unsafe singleton patterns, significantly improving application stability and reliability in system-level code for LG TV.
- Led migration of frontend modules from ReactJS to Next.js, improving performance, maintainability, and user experience across the client portal. This enabled better SEO, faster page loads, and streamlined routing for the EPK dashboard.
- Actively participated in rigorous DSA training programs and mock assessments conducted by the company, consistently practicing and appearing for various technical tests to strengthen problem-solving skills and prepare for internal evaluations.
- Analyzed and debugged complex issues related to the GStreamer multimedia framework, ensuring smooth video processing and playback.

PROJECT

LYnk – URL Shortener

- Containerized a microservice and deployed on Amazon EKS (Kubernetes) with an AWS ALB for traffic distribution; implemented a Redis (ElastiCache) read-through cache that reduced PostgreSQL lookups.
- Used Kubernetes Horizontal Pod Autoscalers (HPA) to independently scale Redirect and Management pods based on real-time CPU/memory, ensuring seamless handling of traffic spikes.
- Offloaded analytics with Apache Kafka (AWS MSK); the Redirect service emits click events to a topic, while dedicated consumer pods asynchronously increment per-URL hit counters in Redis—powering a live dashboard with exact click counts, geographic sources, and referrer traffic.
- Built a Kafka Streams processor to aggregate spam reports against a configurable threshold (e.g., 5 reports/min), automatically flagging malicious URLs in Redis and displaying an interstitial warning page to users before redirecting—keeping abuse-detection decoupled from the critical path.
- Integrated OAuth 2.0 (Google/GitHub) for secure login with JWT-based roles (Free/Premium/Admin) and Stripe Checkout for subscription payments; webhooks dynamically unlock premium features like custom vanity slugs, bulk CSV imports, and link expiration TTLs.
- Secured REST APIs with Redis-backed Token Bucket rate-limiting (per user/IP), parameterized queries and DTO validation against SQLi, CSP headers for XSS protection, and double-submit cookies (SameSite=Strict) to block CSRF—ensuring enterprise-grade security without complicating deployment.
